# Made in Italy since 1965

## Company

Born in 1965, today FIORE is a well-known name, esteemed by businessmen of the same sector as well as the consumer themselves, in Italy and all over the world.

The reason behind this rapid growth and the commercial successes which followed are due to the competence of those working in the company as well to the large investments made by Fiore Rubinetterie over the years.

---

## Project

Fiore production starts from the study of the design according to the customer requirements, market trends and strong desire of innovation. Fiore Research and Design Center is constantly moving between experimentation and technology following the latest innovations regarding manufacturing systems, product optimization and design trends.

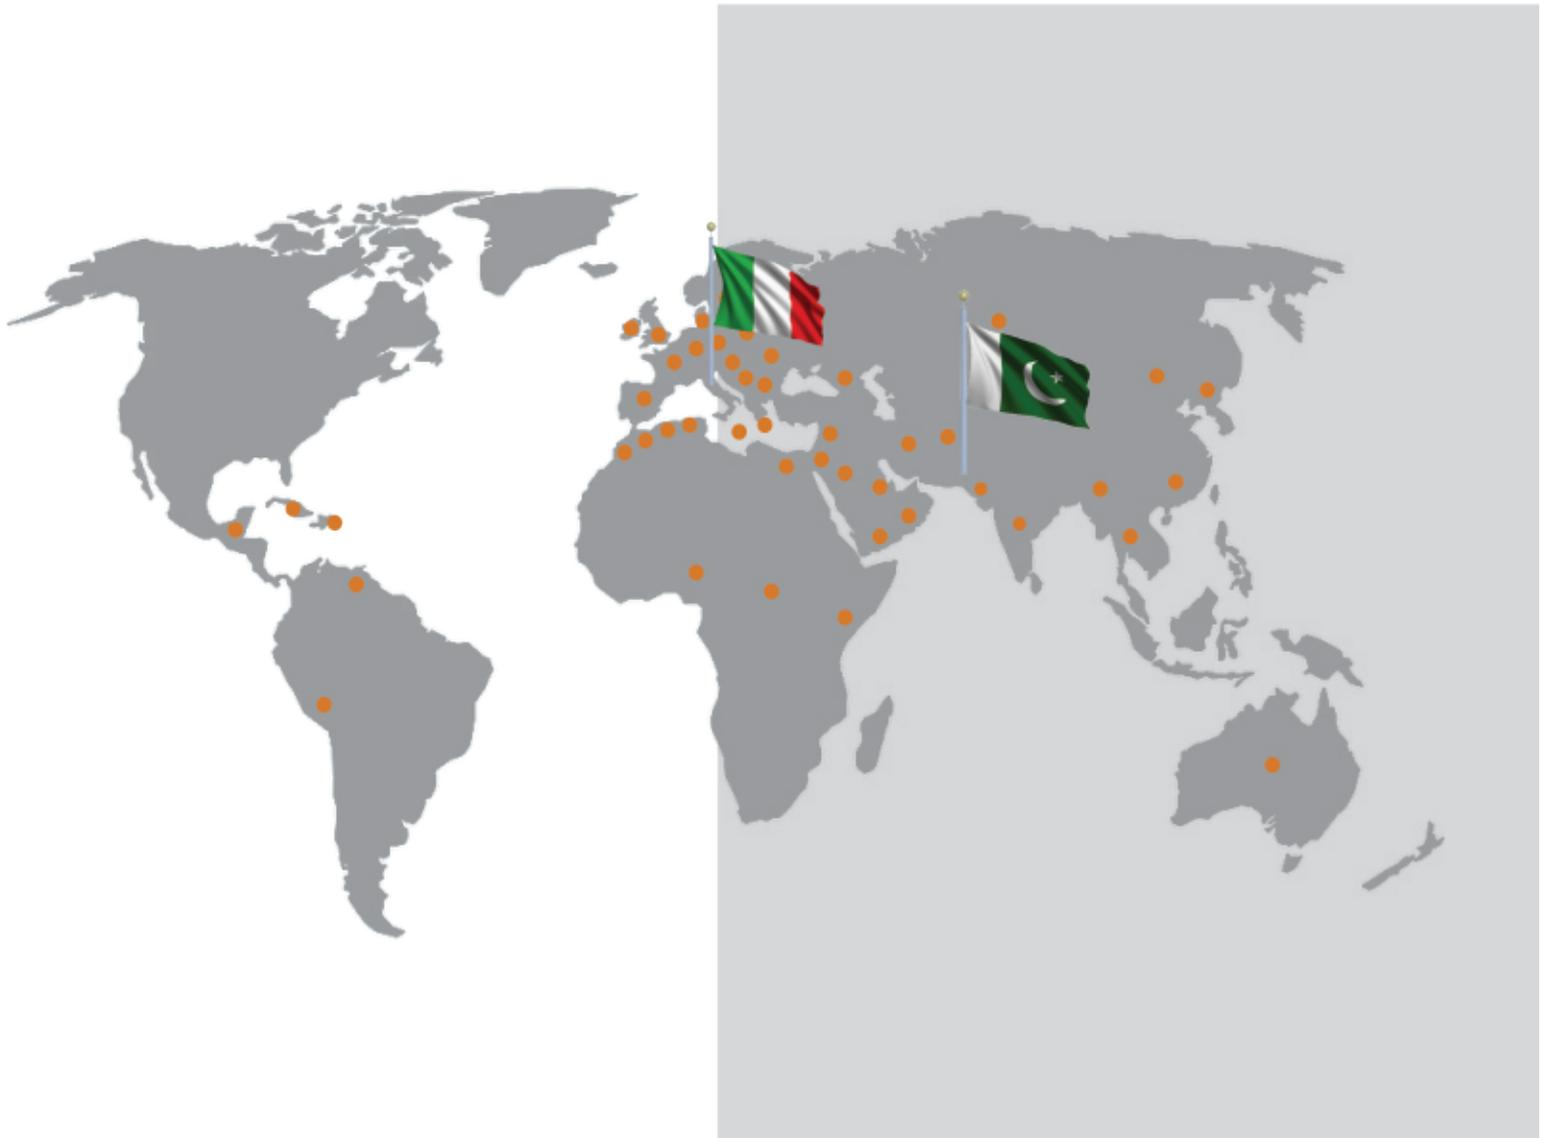

---

## Quality

Product quality, attention to the customers' needs and the ability to meet their requirements in the shortest time possible are the focal points of Fiore philosophy and the reason for our continuous success.

Private use for Basin Mixer and Sink Mixer

Flow rate 6 l/min max at pressure 417,7 kPa (4,2Bar)

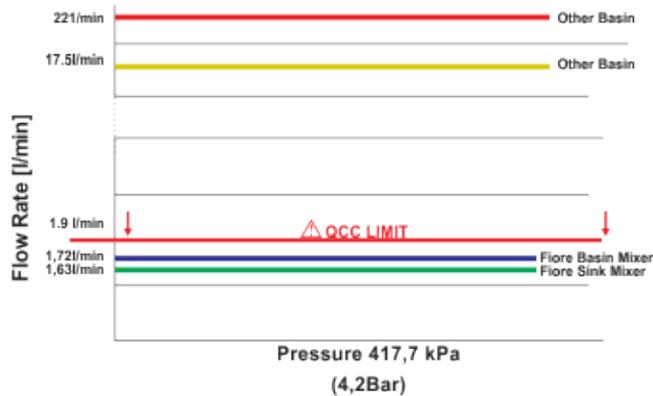

Private use for Basin Mixer and Shower Mixer

Flow rate 9,5 l/min max at pressure 551,6 kPa (5,5Bar)

Private use for Basin Mixer

Flow rate 1,9 l/min max at pressure 417,7 kPa (4,2Bar)

# Saving water makes sense

Water is the essence of life. This makes us proud to contribute to the sustainable development of green cities by supplying our products able to save this precious natural asset.

Green building projects all around the world use these max flow rate:

Private use 6 l/min basin and sink  
Private use 9.5 l/min max bath and shower

Public use 1.9 l/min max basin and sink

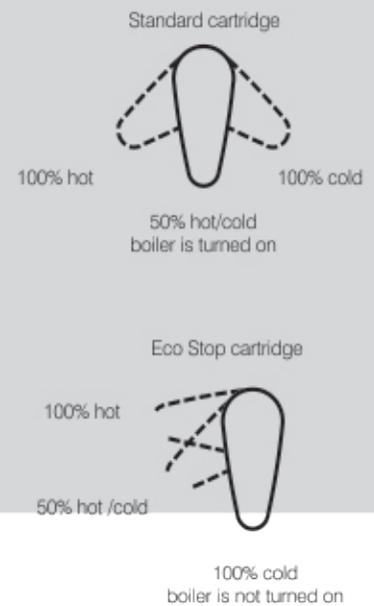

# Water Saving

Mixers equipped with Eco Stop cartridge can save on:

- Water: the usage of water is reduced approximately by 60%. By the smooth gesture you open the desired maximum volume, you just need to rise the lever until the maximum position.

- Energy: the handle in its central position generates only cold water avoiding to mix hot and cold water from the beginning. In this way, the energy needed to produce hot water is reduced. Only when the hot water is really desired, the lever is turned.

Standard Cartridge 100%

Eco Stop Cartridge 40%

## 5 year warranty

### General warranty conditions

- All our sanitary fittings have 5-year guarantee against any manufacturing defect (the warranty doesn't cover the cost of the replacement).
- The warranty is considered as from the purchase date and the invoice is proof of the starting day.
- In order to ascertain any defect and, consequently, help us increase our products' reliability, the items must be called in, free our warehouse, to be tested.
- If any manufacturing defect came out as result of the tests, the warranty would come into force and we would provide either or to replace the product.
- It is important not to mix up a manufacturing defect with a normal wear (warranty and maintenance).
- The warranty is only given on manufacturing defects not considering the normal wear (see "Exclusions").
- The warranty on the external finishing of the items is of one year as from the purchase date.

### EXCLUSIONS

1. Installation not in accordance with the standards and not producing a work of art:
  - not respected diameter of the pipings, which may cause either a high pressure increase or a pressure drop.
2. Not suitable or correct assembling:
  - too high pressure (over the maximum allowed value or 3 bar);
  - inversion of the pipings (hot and cold).
3. Foreign bodies carried by the water deteriorating the mechanism:
  - rinsing not carried out before the definitive placing in water (sand, stones, slags).
4. Damages caused by the water composition:
  - ex: lots of limestone in the water attacking the mechanism or the covering. We suggest the use of a water sweeter filter.
5. Normal wear of the mechanisms, of the rubber part, of the dynamical O ring connections
  - replacing of the rubber part, of the connections, of the cartridges after having checked.
6. Missing maintenance, cleaning of the sweeter filters, greasing:
  - capacity decreased by the limestone deposits in the filter
  - limestone deposits modifying the covering
  - greasing of the dynamical rubber part connections (ever year)
7. Breakage due to the ice:
  - pipings not insulated
  - we suggest to discharge the water installations mainly in second houses.
8. Polishing of the surface with not suitable products (alcohol, abrasives, acids, ...):
  - products made even in a small percentage of ammonia and acetone (cleansing products)
  - We suggest the use of neutral soap + tepid water + soft cloth.
9. Deterioration due to abnormal assembling - incompetent intervention - deteriorated joints - breakage of the pieces - wrong re-assembling:
  - too tight closure
  - breakage of the nuts due to the use of keys unsuitable for the mounting
10. Not suitable supplying of hot water:
  - too weak water heater (ex. For the whole bathroom)
  - low hydraulic pressure on instantaneous water heater
11. Problem of electrolysis.

## Cleaning recommendation for products and care of finish

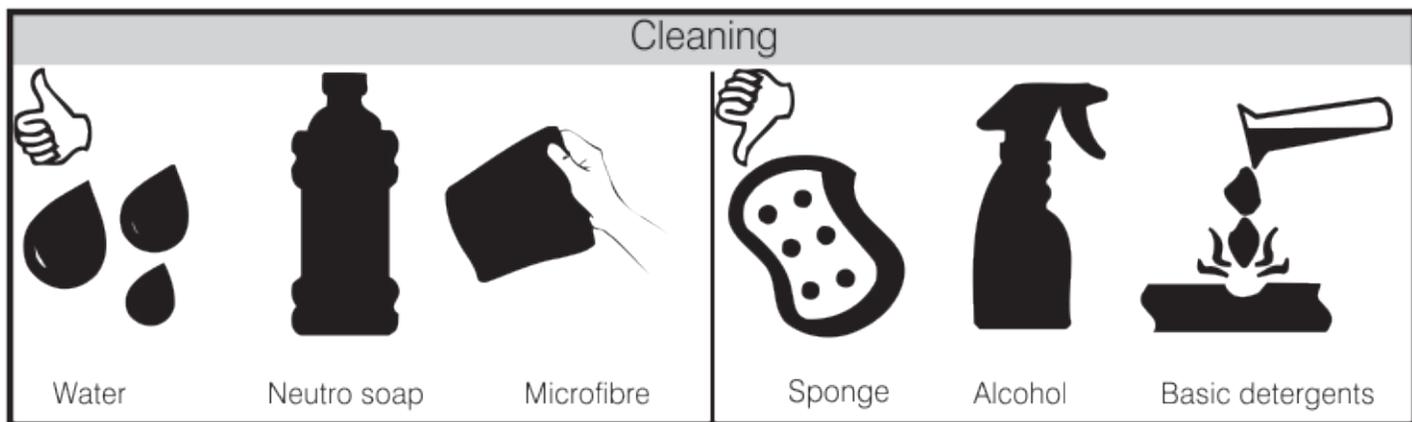

- Only use cleaning material which is explicitly provided for this type of application.
- Robust cleaning methods and aggressive cleaning agents may not just damage surfaces, they can also affect inner workings of the product.
- To remove the limestone never use detergents containing mineral acids (eg. Hydrochloric acid), aggressive acids (eg. Acetic acid), bases (eg. Ammonia) or other aggressive substances, as they can cause significant damage.
- Never use cleaning materials or appliances with an abrasive effect, such as unsuitable powders, sponge pads or micro fibre cloths, or sharp objects.
- The instructions of the cleaning agent manufacturers have to be followed absolutely.
- Cleaning has to be carried out with a specified cleaner dosage, contact time, object-related and adapted to the needs.
- The building up to calcifications has to be removed by cleaning daily.\
- When using spray cleaners, spray the cleaning solution onto a soft cloth or sponge, never directly onto the products, as the atomised spray could enter openings and gaps in the products and cause damage.
- After cleaning rinse thoroughly with clean water to remove any cleaner residue.
- The use of steam cleaners is not permitted. The high temperatures can damage the products.
- Use extreme care during installation.

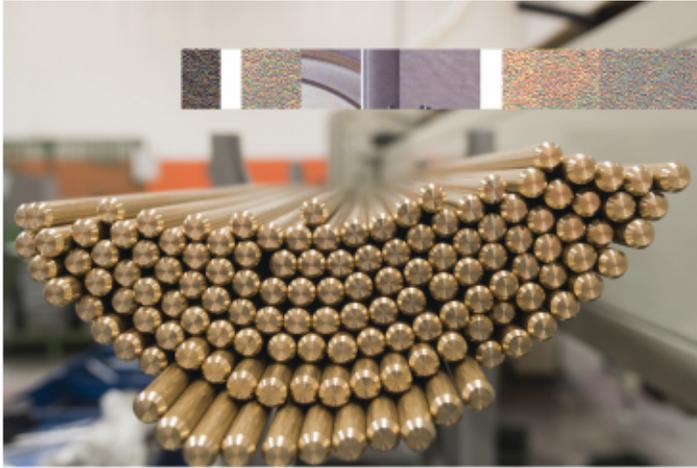

Chrome: the chrome surfaces can be cleaned with a mild detergent or with neutral soap and water.

Color finishes: taps with colored finishes should be cleaned only with a cloth and water or with an extremely mild detergent.

### Important

Residues of toiletries such as liquid soaps, shampoos and shower gels, hair dyes, perfumes, aftershave and nail varnish can also cause damage. Here too: carefully rinse with water after use to remove residues. In case some of these products should settle on the tap during use must be removed immediately. Likewise, do not store any cleaning agents or chemicals under the products. For example in a vanity unit, as the vapore may damage the products.

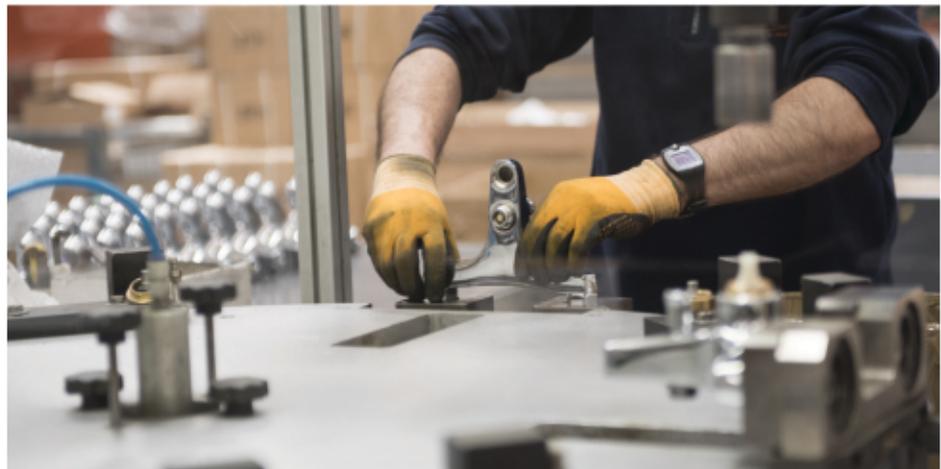

### High quality raw material

The chemical composition of the brass ingot satisfy the UNI-EN 1982-CB7535:

- Cu 58.6
- Pb 1.8
- Sn 0.2
- Al 0.05
- Fe 0.3
- Ni 0.3
- Zn rest

Transfer machines department  
5 transfer machines with robot  
10 transfer machines  
Multispindle and CNC machines  
11 multispindle machines  
3 CNC machines

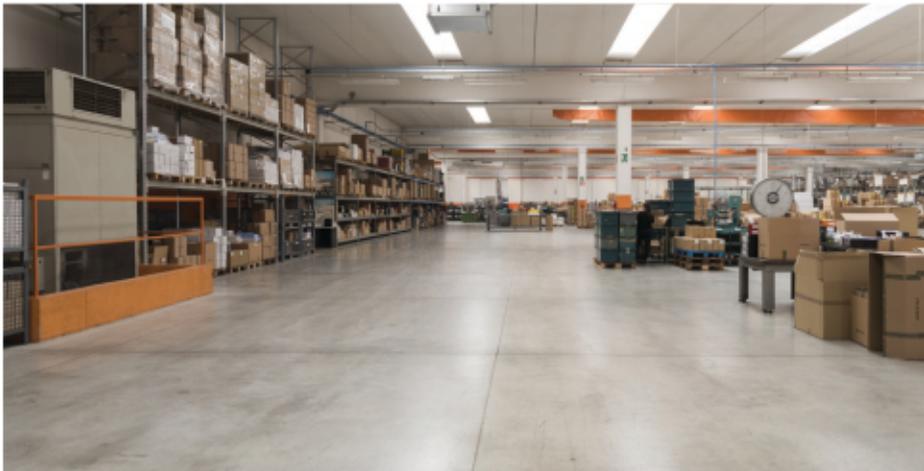

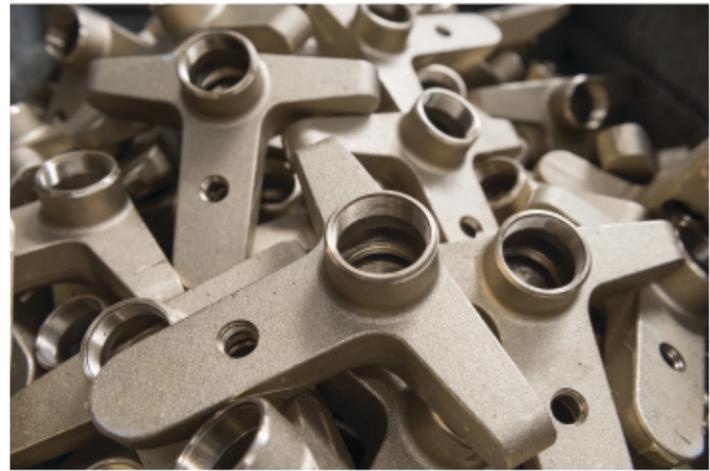

### High quality raw material

The chemical composition of the brass ingot satisfy the UNI-EN 1982-CB7535:

- Cu 58.6
- Pb 1.8
- Sn 0.2
- Al 0.05
- Fe 0.3
- Ni 0.3
- Zn rest

### Chroming process

Fully automated process.

Thickness:

- 15 min for shiny nickel
- 4.20 min for mat nickel
- 4 min for chrome

Thickness of the coating deposition:

- 14 micron of nickel
- 0.3 micron of chrome
